

DELIVERY TRACK

End to End Tracking Solution

REAL-TIME DRIVER TRACKING AND JOB MANAGEMENT SOLUTION

Delivery track provides real time delivery information to all interested parties so that you can focus on your core business.

Delivery Track is developed using open source technologies and can be deployed as a turnkey solution on premise or on the cloud.

Delivery Track App has two key modules – A Web-based CRM for your support personnel to configure drivers, assign tasks and perform real-time tracking of deliveries.

The second module is a mobile app which can be used by drivers to plan their route efficiently. Drivers can update details of their job in real-time, which is synced to a backend CRM.

Interesting? Please feel free to talk to us, we would be glad to help you solve your delivery hurdles.
